

Featuring three easy-to-use tools to improve the efficiency, accuracy, and accountability of your range operations

## Administrator

- > Load unit information from your booking system and trace information from CARSM
- > Electronically review, authorize and catalogue CARSM traces
- > Manage range information such as targets, manoeuvre damage, building occupancy, bivouacs, cemeteries, etc
- > View the electronic audit trail of range activity

## Console

- > Perform workflows in an easy-to-use electronic mapping environment
- > Manage daily unit activity, traces, and range conditions
- > Quickly access DRSO, unit, or trace information by clicking on its graphical representation
- > Map mark-up capabilities for flagging road closures, gate status, and FWI

## Web Viewer

- > Share range activity information with satellite installations or other users
- > Control access through authentication
- > Create and share custom maps such as military and non-military use, unexploded ordnances, range activity, etc
- > Usefull for presentations and sharing information with senior staff
